

## Tufline Pasture Renovators

**Model PRC/8**

Tufline's PRC Series pasture renovators are designed to revitalize pasture land by allowing water and fertilizers to the grass root zone. 17" thin heat-treated shanks with proper pitch angle slice through compact topsoil allowing important water retention. Each shank cuts behind 17" coulters, which slice through dense pasture sods and heavy residue enabling the shank to penetrate without excessive "breakout" or "clodding".

The PRC coulters offer a full range of depth adjustments through the swing arm mount of the coulters. Both shank and coulters arm is shear-bolt protected in case obstructions are encountered. The PRC series has a heavy frame and is available in 4, 6, 8, and 10 shank units.

### MODELS AVAILABLE

Model #	Width	Shanks	Lift Pin	Weight
PRC/4	5'	4	Cat. 1	639#
PRC/6	7' 6"	6	Cat. 2	975#
