

Tufline SF300 ATV Spreader

For faster results with all spreading applications!

Tufline's SF300 ATV Spreader comes with a large 600-pound capacity hopper and uses a speed sensitive dispersion system for even distribution and reduced waste. The SF300 spreader allows for more efficient work with its large payload. It spreads evenly up to 35 feet and offers a dual lever control for left or right dispersion or a full 180-degree spread pattern. The steel hopper is mounted on a tub steel frame and a heavy-duty wheel carriage system. The SF300's wide wheelbase provides stability in all terrains. The wild turf tires allow the spreader to be used in many conditions. The heavy tow hitch mounts with a 1 7/8 inch ball coupling.

The SF300 has an improved frame for more support and is designed with a heavy cast gearbox with an easy lever control disengage system.

OPTIONAL EQUIPMENT

Model #	Description
14623	2" Ball Receiver Hitch
14626	Clevis Hitch
