

## Tufline UTD Offset Discs

### **True offset disc performance for your large ATV, small tractor or utility vehicle!**

Tufline's UTD offset discs bring the performance of agriculture attachments to the off road market. UTD offset discs were developed for larger ATVs, off road vehicles and subcompact tractors. It is a true dual gang offset disc. The UTD's dual disc gangs and wider 9" blade spacing creates a more aggressive and deeper cut. Tufline has developed a unique side draft and disc pressure adjustment system that keeps the unit tracking correctly behind the power unit.

The main frame is constructed with heavy 3" square by 1/4" thick steel tubing. The UTD91016, UTD91216, and UTD91416 come with a manual lift wheel transport system that offers multiple height options.

### **UTD OFFSET DISC SPECIFICATIONS:**

- Dual gang offset disc.
- 9" blade spacing creates a more aggressive and deeper cut.
